

Cedar Siding

Channel Siding • Bevel Siding
Naturally durable & dimensionally stable, this wood siding will be admired for years and years.

Outdoor Projects!

Whether your choice is Pressure Treated, Cedar or the truly spectacular Pedra hardwood decking, at Windsor we can supply it all including the finishing touches like spindles and stair components.

Cedar: Naturally resists decay and insect attack

Pedra hardwood: Flooring for the outdoors, extremely hard. It has a very high resistance to insect and fungal attacks without the necessity of chemical treatments. Kiln dried, reducing shrinking and cupping, and is graded clear with only minor surface defect. Requires no preservative. It can be left to weather a silver/grey or may be sealed with a penetrating stain.

Pressure Treated: Uses an advanced formulation providing all the benefits preservation technology offers in stopping premature aging, wet and dry rot, molds and insects

Fasteners for use with Treated Wood Products

Connectors used for Alkaline Copper Quaternary (ACQ) or Copper Azole (CA) treated wood products should be manufactured from steel, either galvanized or stainless. Stainless steel connectors can be used for maximum service life or severe applications. Where appropriate, copper fasteners may also be used. Fasteners used in combination with metal connectors must be the same type of metal to avoid galvanic corrosion caused by dissimilar metals. For example stainless steel fasteners should not be used in combination with galvanized connectors. For borate treated wood used inside buildings, the same fasteners can be used as for untreated wood.

LP SmartSide Trim

Super strong, engineered and fortified throughout the material with the SmartGuard® process with zinc borate to resist fungal decay and termites.

Oak Barrels

Premium quality barrels offer the basis for many different projects. Great for planters or tree tubs.

Pressure Treated Spindles & Posts

The highest quality raw materials go into all of our exterior railing components.

Easy Gate Bracket Kit

Pre-hinged bracket kit lets you easily build a custom-sized gate or add to a pre-fab fence panel without problem gate sagging.

DECKMATE

Deck Brackets

The bracket is the under deckboard fastening system. It creates a beautiful deck with an unmarred hardwood floor appearance - free from nail/screws holes.

Insta-Step Brackets

Insta-Step brackets are wedge-shaped and made of high-density polyethylene. They support stair treads on simple 2" x 4" or 2" x 6" stringers. Each pair of brackets comes with installation screws, instructions & a template for cutting the 2 simple stringer angles required.

Deckmate Bench Brackets

- Engineered for design & strength
- Used 6" of deck space
- Hardware & instructions included
- Maintenance free
- 2" x 4" or 2" x 6" lumber
